Blood Collection with the S–Monovette®

The ideal solution for perfect results

1 Preparation

- Disinfect in accordance with internal guidelines
- Constriction <1 min
- Observe order of draw

2 Blood Collection – Multi-sampling with choice of collection method

Aspiration method – The gentle method for increased patient comfort
- Attach the tourniquet a few inches above the puncture site
- Disinfect in accordance with internal guidelines

Vacuum method2 – Always a fresh vacuum
- Assemble first tube prior to venipuncture
- Perform venipuncture with needle only

3 Sample Handling & Disposal

- Attach the barcode label
- Ensure CORRECT filling for accurate results
- Mix samples thoroughly by gently inverting the S-Monovette®
- Clot in upright position

After blood collection, store the S-Monovette® Serum/Serum gel in upright position for 30 min.

1 Recommendation in accordance with CLSI standard H4-A7 (GP 41-A7): “Procedures for the Collection of Diagnostic Blood Specimens by Venipuncture; Approved Standard – Sixth Edition”
2 To begin blood collection gently, we generally suggest using the first S-Monovette® with the aspiration method. Then continue with the vacuum method.
3 If you activate the needle protector using your index finger, make sure to press against the lower end of the protection device.
