

New bag design for SARSTEDT pipette tips

The new bag is an inexpensive alternative

Easy-to-use pressure closure

This sturdy bag can be hygienically reclosed.

Secure seal is guaranteed thanks to tamper-evident seal

Until it is used, the bag is free of DNA, DNase, RNase & PCR inhibitors.

Coloured versions

The yellow and blue colour coding of the 200 μ l and 1000 μ l tips means they can be quickly identified.

Dear business partner,

As part of an ongoing process to improve the quality of our products, the bags for the SARSTEDT pipette tips are being gradually changed over to a certified version.

This means that all pipette tips will achieve the 'PCR Performance Tested' purity standard (free of DNA, DNase, RNase and PCR inhibitors). This certification will mean a change to the article numbers as well as the bag packaging. In future, the bag will have a tamper-evident seal and it will also be possible for it to be hygienically reclosed thanks to the pressure closure.

You can find the specific product data and the new article numbers in the overview below. If you have any questions, you can contact our product consultants or our customer service at any time.

Yours faithfully,
Your SARSTEDT Team
